

ABSTRACT OF THE DISCLOSURE

1 A garment for children is provided having a body portion formed from a single
piece of material in a simple geometric design. A generally curved body portion uses as
few as four slits to form a front portion, back portion and opposing arm portions. A front
5 slit can be provided to split the front portion. A neck opening is centrally located and
permits the garment to fold around and be secured to the child while the child lays on
the same. Optional mitten and hood members can be integrally or removably formed
with the garment.
